

Hello and thanks for taking a look at this quick test project.

Your success in this test project will determine whether we hire you for the larger ongoing CSS project in our company.

Your allowed time limit for this project is TWO HOURS.

In General 🙌

We're moving our app from custom-designed HTML/CSS pages to the TailwindUI component UI library.

TailwindUI.com is a collection of UI-focused and marketing-focused HTML & CSS components built using Tailwind CSS. The important thing to understand about TailwindUI is that all of the components in the library look **consistent** with each other, like they belong to the set.

So -- to get started, please familiarize yourself *in detail* with the TailwindUI component library.

TailwindUI Library Access:

1. Go to <https://tailwindui.com>
2. Sign in with: murray@xperienify.com / soBvy4TBcZLSuR
3. You can see all the components there
 - Also, here are the figma assets:
<https://www.dropbox.com/s/yffn50ry8kn4nmf/tailwind-ui-figma-kit-2021-05-07.fig.zip?dl=0>

Your Test Project 🙌

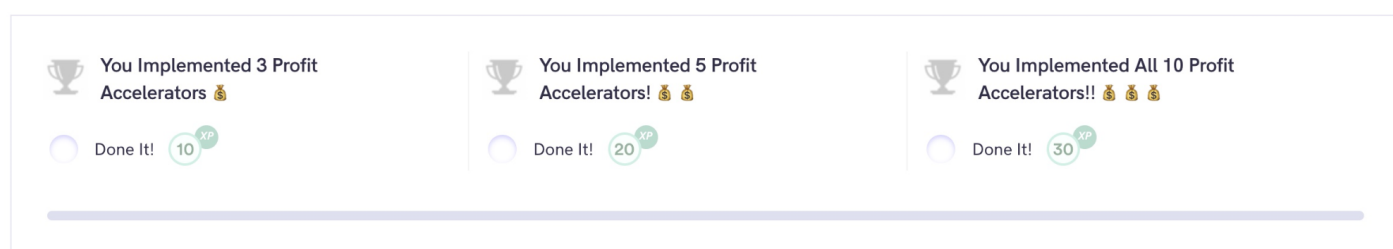

We have a range of different pages and components in our app. For example:

- <https://share.getcloudapp.com/DOuq1npj>
- <https://share.getcloudapp.com/NQuo9R62>
- <https://share.getcloudapp.com/04u2nGpA>
- <https://share.getcloudapp.com/Z4uK9IWK>

For this test project, the widget we would like you to convert to TailwindUI is the Goals widget:

YOUR 10 DAY GOALS 🏆

We've suggested a few goals here for you. Feel free to customize to make them more inspiring! Check them off when complete to claim your points!

You can access the platform here for a closer look:

<https://liveyourmessage.xperiencify.io/course-profit-accelerator/?magic=AACiQARKCiWAbEvMvw0>

👉👉👉 **Important!!!!** 👉👉👉

1. We are going to be adding all the ~100 TailwindUI components to a **page builder** to allow our customers to use them to build a custom membership site
2. For that reason, **our** 10 existing components must **LOOK** exactly like the TailwindUI style in order to "fit in"
3. In other words, this project is **NOT** to rebuild the widget in tailwind. It's to convert it to Tailwind **AND** look like the TailwindUI style. Please do NOT simply rebuild the goals widget in Tailwind.

To Be Successful 👉

In general, to be successful in this test project and the larger project, you will need to be able to:

- Look at the requirements of our widgets
- Review what elements and pieces are available in the Tailwind library
- Create a new version of our widget using the available elements and pieces of TailwindUI so that the new widget looks like it fits 100% in the same style, but preserves the same functionality of our widget.

Test Project Deliverables

- Send me a link to a page on **your server** showing the Goals component built in TailwindUI
- The Goals component should be a style match with the TailwindUI component library
